School Facilities Accounting for the CBO and District Leaders

April 15, 2025

CASBO Conference, San Jose

ŕ

Lettie Boggs, CEO of COLBi

Today's Presenter

Lettie Boggs, CEO (714) 505-9544 Leboggs@ColbiTech.com

Lettie Boggs held both Director of Facilities and Assistant Superintendent positions before starting **COLBI** in 2002. As CEO of **COLBI** she works with over 250 school districts statewide in managing their building programs and bidding environments.

She has served on the board of the Coalition for Adequate School Housing and was one of the founding faculty of the CASH School Facilities Leadership Academy. She also served as Chair of the CASBO School Facilities Professional Council. She served as Chair of Californians for School Facilities, now known as CASH Federal Network. She is President Elect of Assn for Learning Environments SoCal Chapter.

Please feel free to call if you have any questions about today's presentation!

OUR SERVICE LINES

To access a copy of today's presentation please follow the link...

Congratulations!

The District has passed a bond or otherwise qualified for funding

You get to do much needed work!

So let's get ready...

The "Business" of Facilities

Land Acquisition Planning Construction

Which is very different from Education

- It will add accounting, reporting, and audit requirements
- Accounting for projects is a forced fit in the education ledgers

Multi-year, Multi-fund Projects In a Single Year Fiscal Budget

While we are all in the process of providing for education of our students, the business work in facilities is substantially different than in other depts

- FISCAL is mandated to run an annualized fund accounting system
- FACILITIES projects do not fit neatly into single years and projects rarely have a single source of funding (multi-fund, multi-year projects)

Therefore, you need to manage with the whole picture, and report by fund for each individual year

G.O. Bond or Issuance of a Bond

- Each bond must be accounted for separately as there must be a nexus between the bond language and the expenditures to determine they are appropriate
- Each issuance of that bond has to follow the same bond language so has not historically been tracked separately
 - But this seems to be a new ask due to how FISCAL is being asked to report it
- Discuss using a First In/First Out (FIFO) approach for applying expenditures to issuance as it simplifies the reporting and tracking significantly

You can help or hinder!

How to hinder...

Insist that Facilities do everything the way every other dept does

Make changes to documents without conversation - particularly coding on payments!

Make unnecessary work (they have enough and so do you!)

Remember...

Facilities is in a different business within your fiscal requirements

They have factors regarding funding nexus that those outside of Facilities may not know

There is more than one right way for many things – which one is the most efficient and meets everyones' needs? Talk about it!

Let's talk about the challenges...

Understanding is key!

- Contingency
- Budgets
 - Multi year
 - Movement
- Capitalization vs Inventory Rules
- Retention
- Year End

Contingency or Reserve

- FISCAL uses reserves to assure that in unforeseen or catastrophic events there will be money to survive it
- FACILITIES is doing complex large projects that involve a significant number of unknowable components, so it is prudent to provide contingency to use throughout the project to address those things

The sky is not necessarily falling when FACILITIES uses contingency, but FISCAL may think that it is if you call it reserve or do not communicate that it is normal to apply it during the course of doing projects

What to look out for

...a pattern of changes that are due to poor design or poor planning ...frequent "fishing" for funds (Requests for Information)

There are three levels

- Construction
- Project
- Program

If you pad them all, you will not have enough money.

Explain your plan to FISCAL and they will have more comfort that you are thinking things through and monitoring the contingencies.

Change orders may include a non-construction impact so you always need contingency in the project that is not dedicated to construction.

Contingencies

The less you know – the bigger the contingency

Modernization needs a higher contingency level due to the higher level of unknowns

Unforeseen conditions is generally accepted for use of contingency, scope creep is not!

Allowances in lieu of contingency is a harder sell with Fiscal as it is viewed as a preapproved blank check. Allowances should have a Change Order type of review.

Budget Movement

- All the CAPITAL FACILITIES objects are 6xxx so movement between them does not require board action as is common in other budgets
- Change in project funding or total commitment to project does require board action

Always keep the board informed!

Inventory or Capitalization Rules

CALIFORNIA
SCHOOL
ACCOUNTING
MANUAL
2024 EDITION

- In FACILITIES we are doing capital projects so expenditures should be recorded in 6xxx objects and they follow CSAM <u>capitalization</u> rules
 - The first time you purchase it for the initial essential equipping of a school the rules are different
- Most of what FISCAL does is operational and not recorded in 6xxx objects and follows CSAM <u>inventory</u> rules
 - The confusion is amplified by the assignment of various 4xxx
 objects for F&E so that they can get on the appropriate inventory list
 - but that does not change the fact that you capitalize it for the initial essential equipping of the project

Officially approved by the California State Board of Education

Published by the California Department of Education Sacramento, 2024

Determining whether expenditures are capitalized

- The rule of thumb is that if you would typically buy something annually from the supply budget of a school, then it does not qualify as a capital expenditure
- Things typically bought individually are capitalized when bought together for the initial essential equipping of the school (one chair vs 600 chairs)
 - Later, when repaired or replaced they may be supply items
- And then OPSC has different rules so read your grant agreement (they have shifted costs to the districts)!
- This is expensive money and is not to be focused on buying things that will not last

Match the source of funds with the type of use

District Held Retention

- FACILITIES is tracking retention at every pay app
 - If paid into an escrow account = no liability
 - If retained by the district = a liability
- FISCAL needs to book the unpaid retention as a liability
 - It no longer belongs to the district
 - This can be done monthly, quarterly, or annually – but always by closing

Not doing this creates misstatement in the financial statements and will get you an audit comment

Year End and End of Project

At <u>year end FISCAL</u> will need the following for each ongoing project:

- Work in place value (or work in progress) aka WIP
- Value of retention that is district held

At end of the project FISCAL will need:

Breakdown of project value by site

Be sure you do an appropriate close out process!

Land (grounds) or Site Acquisition

This is an important discussion to have prior to projects so that

- FISCAL understands how you are using the codes, that it does not violate CSAM or FCMAT criteria
- It is essential for appropriately accounting for the work without making the time commitment for doing the work unmanageable
- 3. For easing communication

- In the maintenance fund and for maintenance and grounds
 - 6100 is Land related
 - 6200 is Building related
- In Facilities
 - 6100 is Site Acquisition and Approval
 - 6200 is the rest of the project (Planning and Construction)

You may use a different set of 6000 objects for the two departments

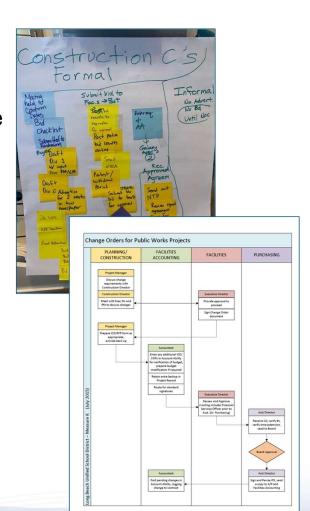

Land and Improvements

- Report your project "completed & stored" numbers as contracted and account for them in the Construction object code
- You do not have to break out the portion of work done in grading and landscaping to report them separately!!! They are a value of the project improvements rather than land value
- The value of the land is not depreciated
- The value of improvements to land and buildings is depreciated

How you can help

- Acknowledge the complexity and importance of this work to the district
- Understand the funding nuances, work together to comply
- Clearly define who has the lead and when
- Work together to coordinate contracting and payments
 Do the workflow together and make sure it works
- Support one another
 There are enough project challenges without internal ones!
